

Python Deployment With Flask

Running the project

[**Note:** I have maintain my project in both '**.py** and **.ipyb** file format .
'**cab_fare_project1.py**' file for run in any **command prompt** and
'**Cab_fare_project1.ipyb**' run in **jupyter** only but I have created it in
most understandable in nature]

1. Ensure that you are in the project home directory (i.e here in
'**Deployment in python with Flask**' folder). Create the
machine learning model by running below command -

python cab_fare_model.py

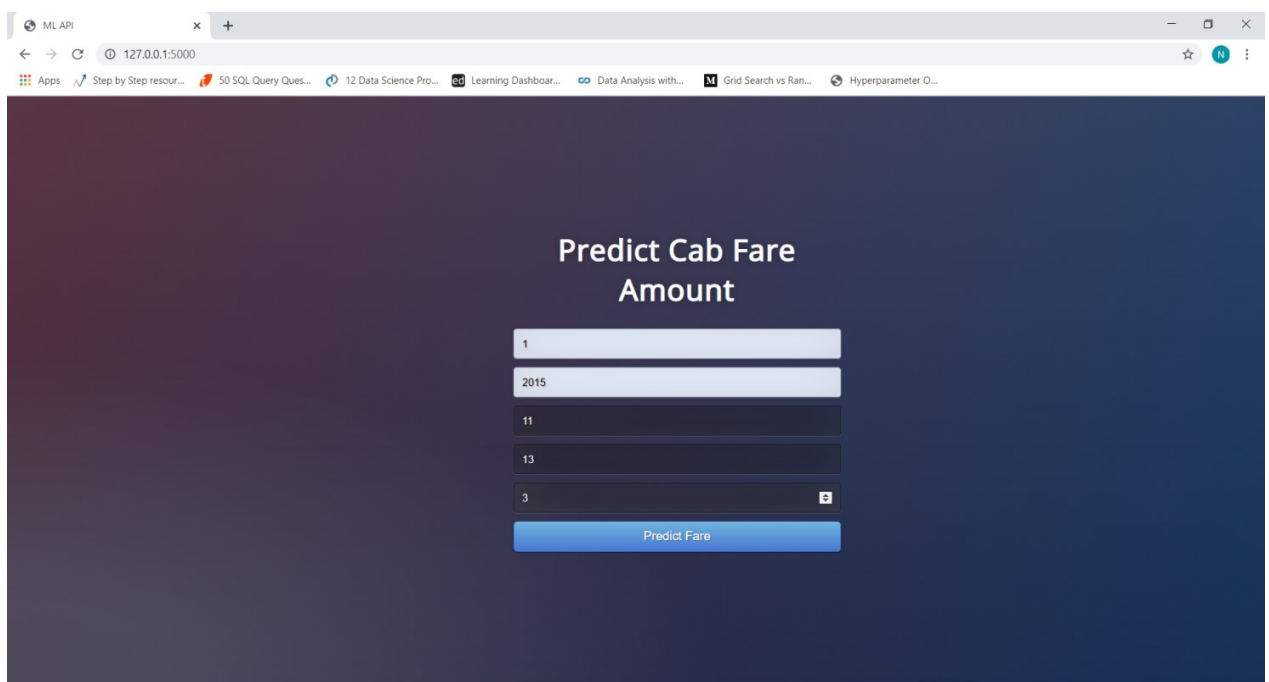

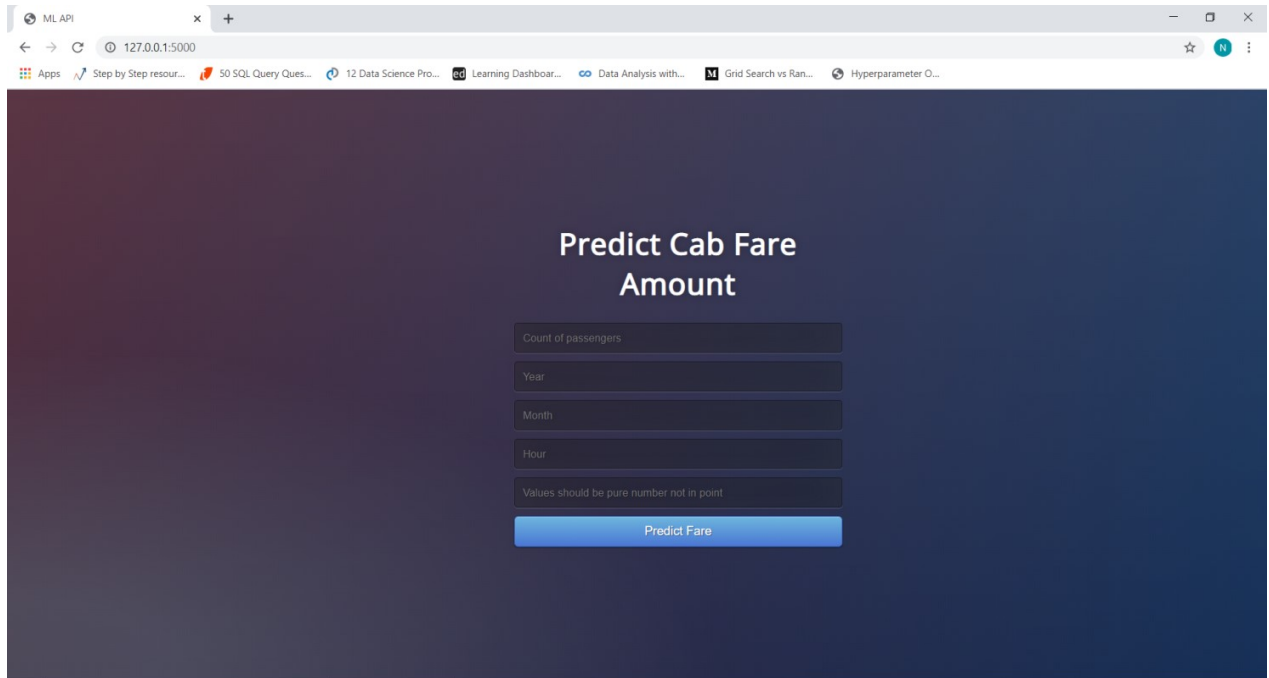

This would create a serialized version of our model into a file
model.pkl

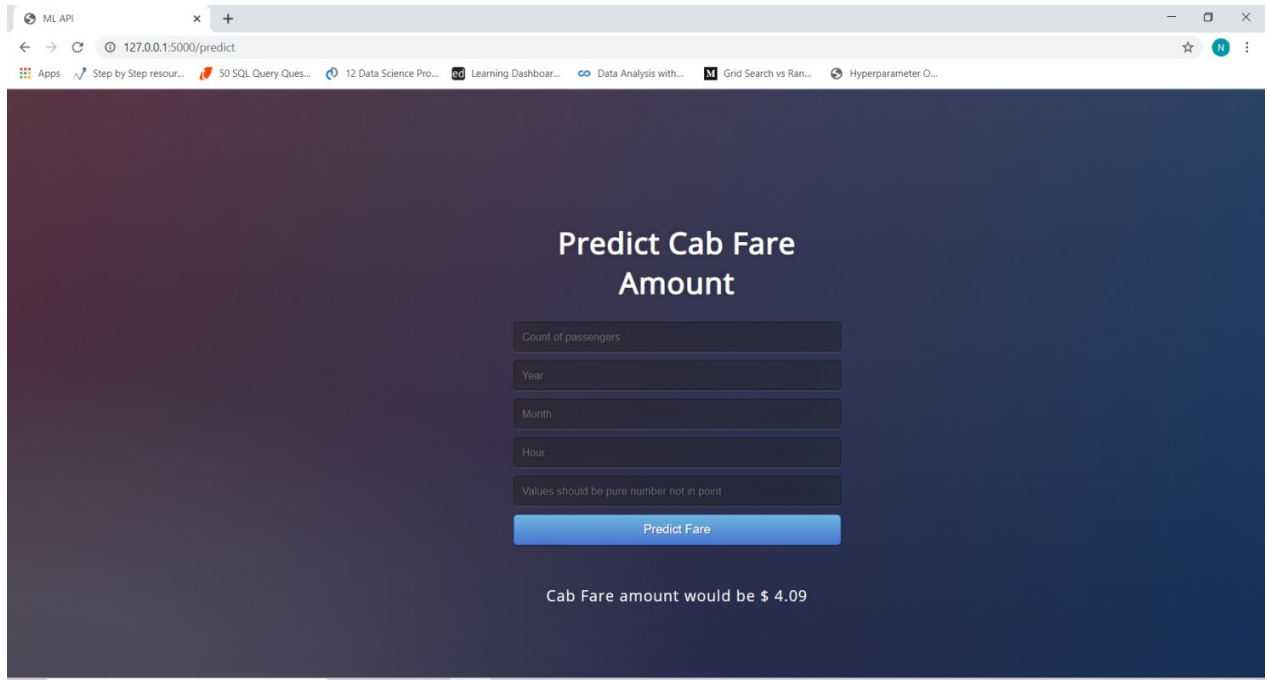

2. Run **app.py** using below command to start Flask API

python app.py

By default, flask will run on port 5000.

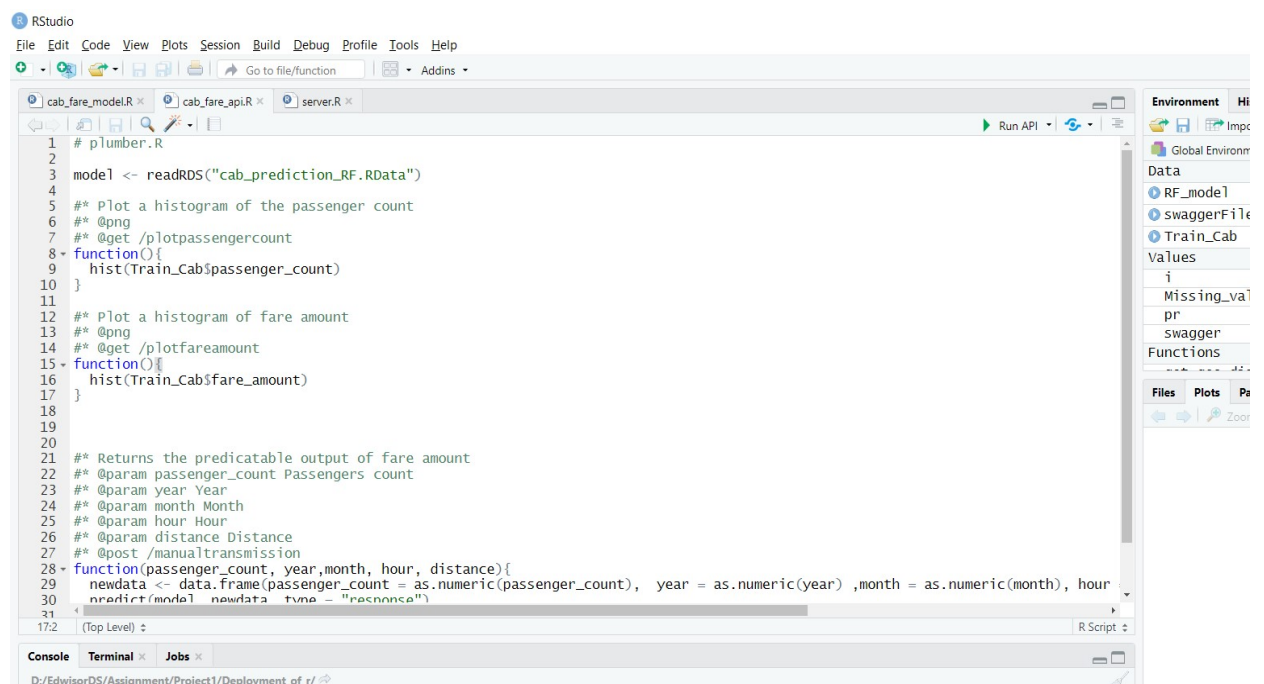

3. Navigate to URL <http://localhost:5000>

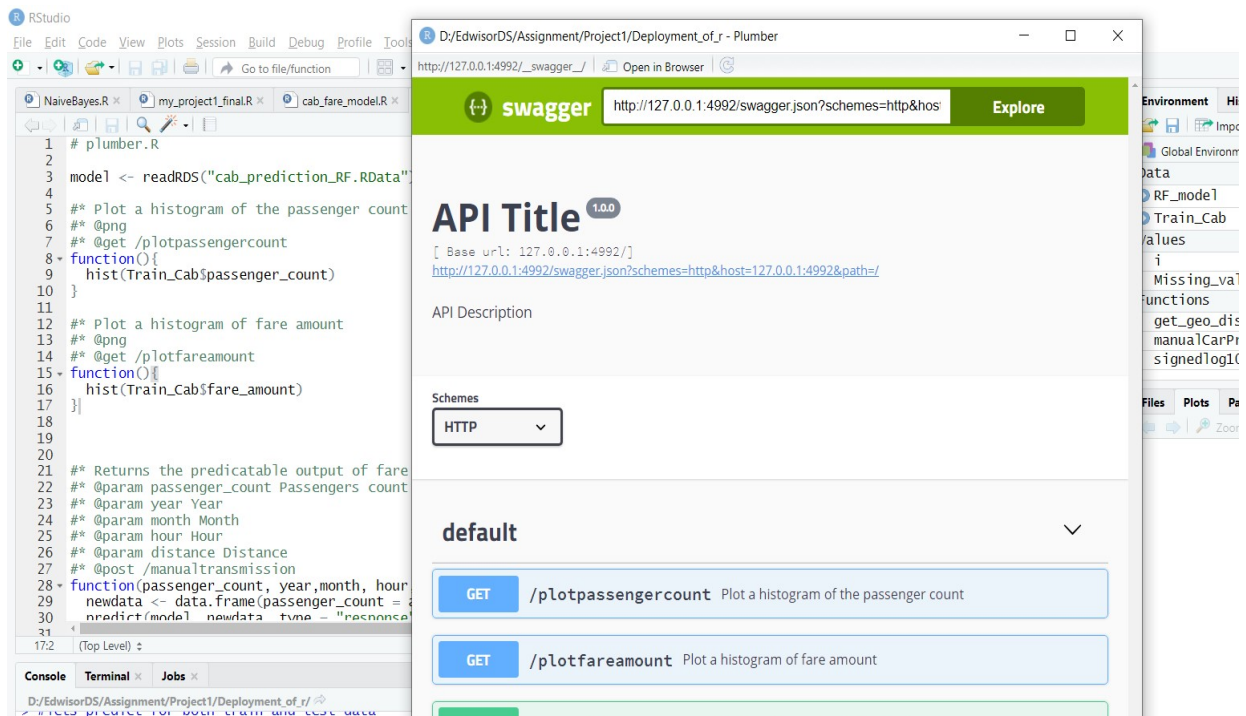

R Deployment with Plumber

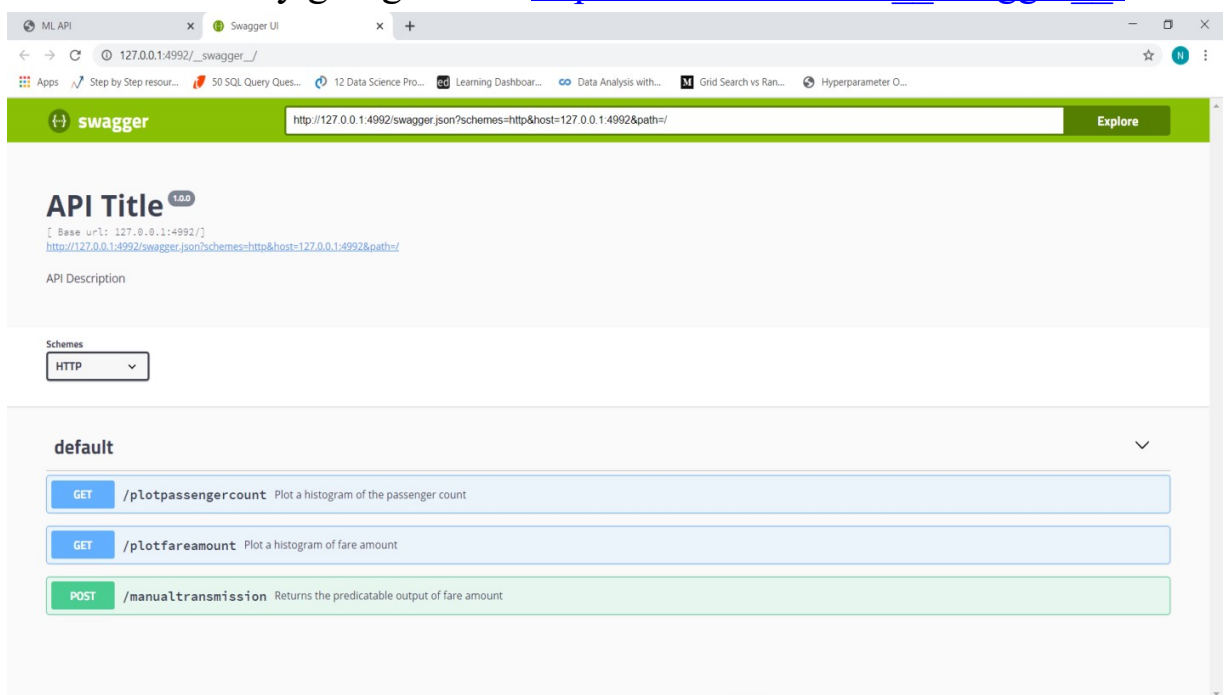

1. We have maintain three basic files ‘**cab_fare_model.R**’, ‘**cab_fare_api.R**’ and ‘**server.R**’ for R deployment containing in folder ‘**Deployment_of_R**’.
2. First run ‘**cab_fare_model.R**’ file
3. Then you can run API by opening file ‘**cab_fare_api.R**’ and then click on run api.

4. Which will open following window

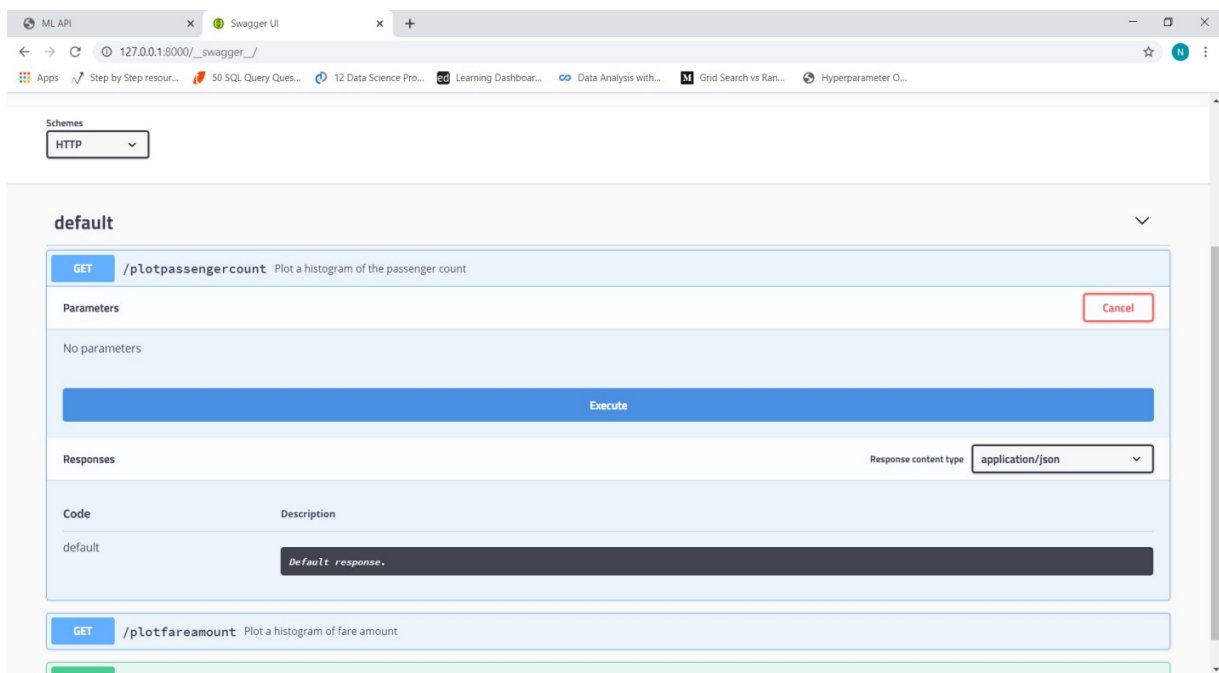

5. You can open it in browser by clicking on upper right side 'Open in Browser' or by going to link http://127.0.0.1:8000/_swagger_/

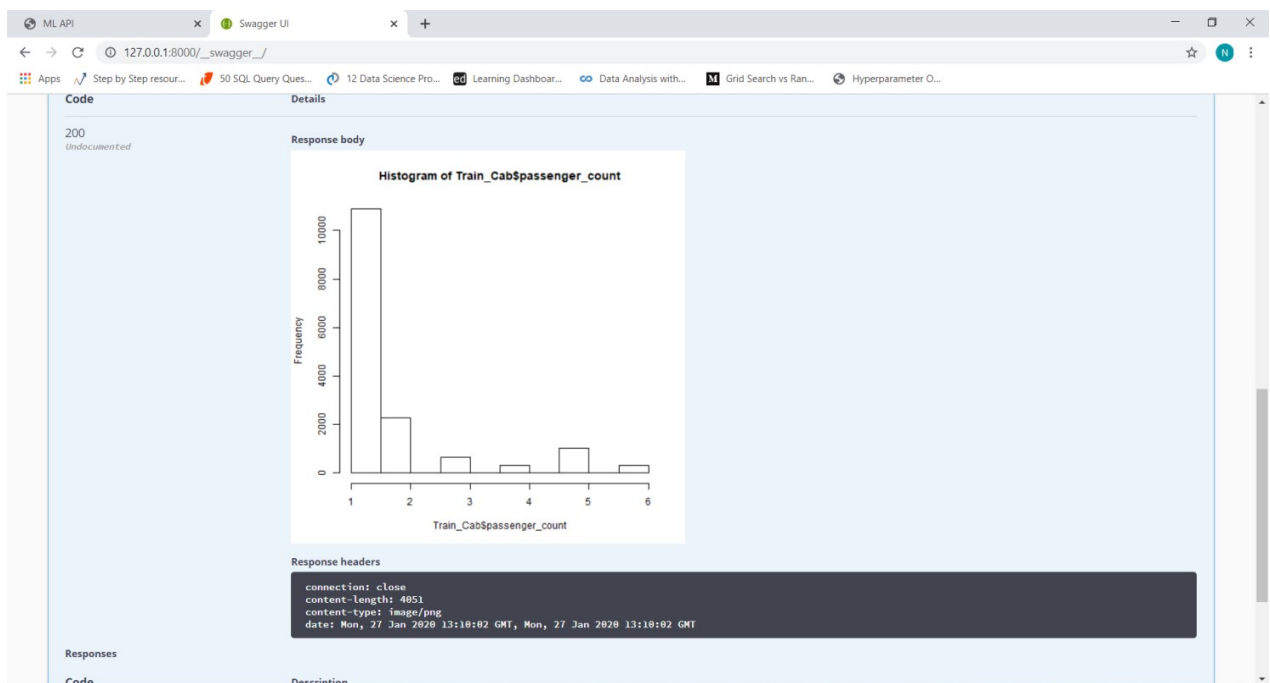

6. Now you can open one by one segment and see implementation.

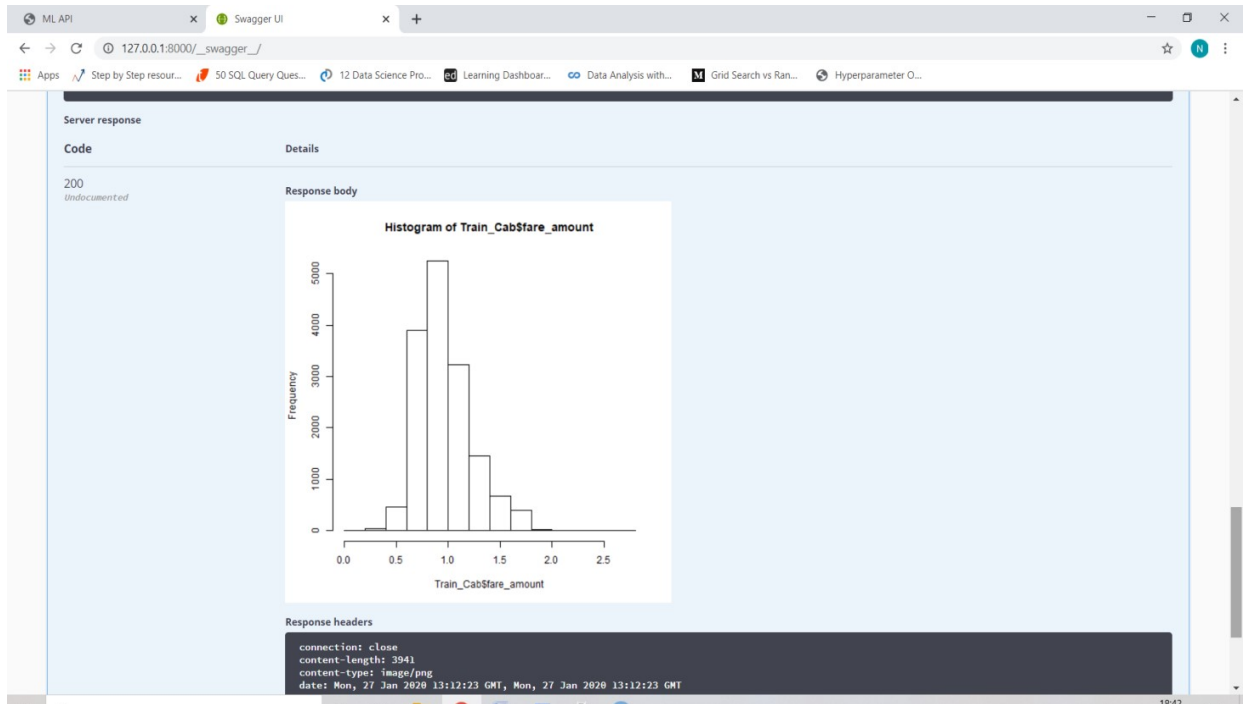

First click on ‘Try it out’ option

Then click on ‘Execute’ button. It will execute following

Similarly you can do it for all segment,

ML API x Swagger UI x +

127.0.0.1:8000/_swagger_/

POST /manualtransmission Returns the predicatable output of fare amount

Try it out

Name	Description
distance string (query)	Distance
hour string (query)	Hour
month string (query)	Month
year string (query)	Year
passenger_count string (query)	Passengers count

Responses

Response content type application/json

ML API x Swagger UI x +

127.0.0.1:8000/_swagger_/

Apps Step by Step resour... 50 SQL Query Ques... 12 Data Science Pro... Learning Dashboar... Data Analysis with... Grid Search vs Ran... Hyperparameter O...

POST /manualtransmission Returns the predicatable output of fare amount

Parameters Cancel

Name	Description
distance string (query)	Distance <input type="text" value="1.23"/>
hour string (query)	Hour <input type="text" value="2"/>
month string (query)	Month <input type="text" value="12"/>
year string (query)	Year <input type="text" value="2009"/>
passenger_count string (query)	Passengers count <input type="text" value="5"/>

Execute

ML API x Swagger UI x +

127.0.0.1:8000/_swagger_/

Apps Step by Step resour... 50 SQL Query Ques... 12 Data Science Pro... Learning Dashboar... Data Analysis with... Grid Search vs Ran... Hyperparameter O...

Execute Create

Responses Response content type

Curl

```
curl -X POST "http://127.0.0.1:8000/manualtransmission?distance=1.23&hour=2&month=12&year=2009&passenger_count=5" -H "accept: application/json"
```
